

Antoine Frénay - TB

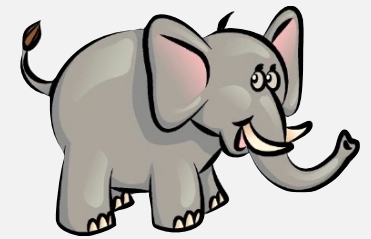

I ♥ provocative,
paradigm shift
hypotheses

Now interested in second-order traits in
microbial evolution: traits impacting organism's
ability to evolve

eg mutation rate, DNA repair, evolvability
suppression and contingency loci...

Studied mathematical logics,
cognitive sciences & animal
behaviour in a previous life

Generally ok with computing &
data analysis

Evolvability suppression: organisms
restricting their own evolutionary
potential, eg preventing loss of
cooperation or cancer
