

Antoine Frénoy - TB

Work on **microbial evolution**

Evolution = Ecology + Mutagenesis

I ♥ provocative,
paradigm shift
hypotheses

Studied mathematical logics,
cognitive sciences & animal
behaviour in a previous life

Interested in **second-order traits**,
ie impacting organism's ability to
evolve (eg mutation rate, DNA
repair, evolvability suppression,
contingency loci...)

Evolvability suppression:
organisms restricting their own
evolutionary potential, preventing
loss of cooperation or cancer
